

AKVIS Artsuite v.5.0

Jorga Rigenbach

The AKVIS Artsuite v.5.0 is a collection of effects for framing/decorating photographs. I use it as a plug-in through *Photoshop* but it also comes as a standalone application. It has a clean, easy-to-navigate interface with rollover explanations of every function.

There are a number of frame styles (AKA edge Effects) and each style has a number of options. You can change the Transparency, Frame Width, Merge Level, and Random Seed. (Random Seed is a random number generator that dictates the distribution of the strokes in a particular frame.) The options vary with the frame or effect that you choose.

In addition to Frames, AKVIS Artsuite v.5.0 also offers effects like Black-and-White, Texture and Glamour.

It's a quick, easy way to dress up photos. It adds something special to picture books, prints and presentations.

About: AKVIS Artsuite v.5.0
